Microsoft Linguistic Information Sound Editing Tool With Key

Getting speech in a Microsoft Agent character's mouth without having to generate your own sounds can be a difficult task, especially when working

with an agile team with multiple artists and a hard deadline for each character. Can you imagine the time and effort that can go into creating a multi-pass lip-synching pass for a single character, especially when you only have a few days? The conversation aspect of the task is made even more difficult when you have to make sure the speech of every character matches. Syncing an entire game

with a single character is unheard of in the industry, which is why there are as many failed syncs as there are successful ones! With Microsoft Linguistic Information Sound Editing Tool, all of this can be taken off your hands with no time spent generating your own sounds! Once you have the.wav files and the.lwv files all prepared, it's time to edit the.lwv files with Microsoft Linguistic

Information Sound Editing Tool. With this tool, it's as easy as dragging and dropping a character's name into the window and then clicking on the Save button. Microsoft Linguistic Information Sound Editing Tool Features: Sound Editing Tool (SED) - This area is the core of the Tool and is where all the magical and ingenious sound editing takes place. By default, it will open up the

default sound editor that you installed when you installed this Tool, if you have not changed any options. SED is available in either English or Japanese.

Sound Editing Tool (SED) Options Dialog - This dialog is where you will make your choices about what will happen when you drag and drop a character's name into this SED. You can choose to start a new project and create a new

SED, start with the current SED or use the default SED.

You can also change the SED language. For the default SED, all of your files will be saved as Japanese and for the current SED that you are working with, your files will be saved as English. Add BGM Effects - Audio files with BGM effects can be included in your files, depending on what you have selected for the BGM effects options. You

can also optionally include BGM effects on your generated.lwv files. The results are really nice and can easily have the feel of the original in game dialogue with an added touch. Lip Synching – When you drag and drop a character's name into Microsoft Linguistic Information

Microsoft Linguistic Information Sound Editing Tool is a utility that will enable you to easily generate phoneme and word-break information for spoken audio (.wav format) files to create enhanced (.lwv format) files with additional information to support improved quality lip-synching of Microsoft Agent characters when speaking.

Microsoft Linguistic Information Sound Editing Tool should be able to edit.wav files on disc, via a mapped network drive or an FTP directory. If you don't have MS Agent you can still generate.lwv files but those will only be able to be used on Xbox 360 consoles. Easy to use interface which will guide you through an easy wizard to help you generate the desired information in a

matter of moments. Once you've generated your required files you can then install them to your system and use the speech toolbar in the Virtual Agent suite to sync your speaking. Quality lip synching is vital if you want your video to look like the best video game on the market. Bugfixes have been made to improve the quality of the generated files. Windows 95 / XP :

What's New In Microsoft Linguistic Information Sound Editing Tool?

Microsoft Linguistic Information Sound Editing Tool is a utility that will

enable you to easily generate phoneme and word-break information for spoken audio (.wav format) files to create enhanced (.lwv format) files with additional information to support improved quality lip-synching of Microsoft Agent characters when speaking.

Key Features:

- Generate phoneme information for the spoken audio file using the phonemes in the.lgx file. The phoneme

information in the.lgx file can be updated using Windows Speech Recognition engine (WSR) to create the.lwv file with updated information for the spoken audio file. •

Generate word-break information for the spoken audio file using the word-breaks in the.lgx file. The word-break information in the.lgx file can be updated using Windows Speech Recognition engine (WSR)

to create the.lwv file with updated information for the spoken audio file. •
Generate phoneme information for the spoken audio file using the phonemes in the.lgx file. The phoneme information in the.lgx file can be updated using Windows Speech Recognition engine (WSR) to create the.lwv file with updated information for the spoken audio file. •
Generate word-break

information for the spoken audio file using the word-breaks in the.lgx file. The word-break information in the.lgx file can be updated using Windows Speech Recognition engine (WSR) to create the.lwv file with updated information for the spoken audio file. • Add Microsoft Agent (MSA) to the spoken audio file using the MSA files for speaking in English or Japanese languages. • Reverse

speech can be generated for spoken audio file if the audio file has a speaker turn • Generate pseudo-English audio (.pEa) file by combining words, phrases, and sentences from the spoken audio file with English text if the user chooses, or the user can enter English text directly. A pseudo-English audio file can be created from a spoken audio file with the following steps: • Extract

sentences from the spoken audio file using the sentence extractor (SXE) (this is possible only when the source files are WAV files).

- Convert the extracted sentences into a phonetic form.
- Translate the extracted sentences into English, and add the translated

System Requirements For Microsoft Linguistic Information Sound Editing Tool:

Mac OS X 10.6 or later
1.8 GHz Processor
512 MB RAM
600 MB hard drive space
Graphics card: 512 MB or more
Install Notes: To install the Compatible DRM Software you need a Mac OS X 10.6 or later To be able to install the Compatible DRM you must have a Mac OS X 10.6 or later The file of the Compatible DRM Software

has the name “Compatible DRM AppleSoftware1.zip” To be able to install
